You can always use Web-Based Email to send and receive email messages. But you also can view your email with an email client. To access your email through an Android® mobile device, add an account with the settings outlined below.

Before You Start:

You need the names of your incoming and outgoing servers to set up email with a client. Web-Based Email contains this information.

1. Log in to Web-Based Email at email.secureserver.net.
2. From the **Help** menu, select **Email Client Settings**.
3. Make a note of your incoming and outgoing server information.
4. Continue with the procedures outlined below to set up your email client.

To Use an Android Mobile Device with Your Email

1. From the Home screen, tap the gray **Application** button.
2. Tap **Email**.
3. Tap **Next**.
4. Using the keyboard, enter:
Email Address
Your full email address

Password
Your email password

5. Tap **Next**.
6. Tap **IMAP Account** or **POP Account**.
7. Enter the following:
Username
Your full email address

Password
Your email password

IMAP/POP Server
Your Incoming POP or IMAP Server

(Optional) Security type
SSL (Accept all certificates)

IMAP/POP path prefix

No changes required

Incoming port

IMAP without SSL - **143**

IMAP with SSL - **993**

POP without SSL - **110**

POP with SSL - **995**

8. Tap **Next**.
9. In **Outgoing server settings** type:
Server name
Your Outgoing SMTP Server

(Optional) Security type

SSL (Accept all certificates)

Outgoing port

Without SSL - one of the following: **25, 80, 3535**

With SSL - **465**

Require sign-in

Select to enable

Username

Your full email address

Password

Your email password

10. Tap **Next**.
11. Choose desired **Account Settings**.
12. Choose desired additional settings on **Set up email**.
13. Tap **Done**.
